BY ADINA LIEBLICH • CIVIL ENGINEER • PERTH, AUSTRALIA

Pre-written. Copy-paste. Edit to taste. Each post obeys the playbook (hook < 140 chars, length 600–2000, link in first comment, 3–5 niche hashtags).

Times in **AWST (Perth)**. The first-comment URL goes in a separate reply you post immediately after the main post.

● WEEK 1 • Launch week

Mon • 8am • Template D — Architecture carousel

First-comment URL: demo.adinaliebllich.com **Asset:** existing animated arch SVG → 8-slide carousel

Hashtags: #FastAPI #AWSLambda #Claude #BuildInPublic #AEC

Tomorrow I launch Lilach. Today, the architecture.

Voice-first personal AI on AWS Lambda + Claude + Notion. Built solo in 8 weeks. In da

Five components total. No orchestration layer. The decision I keep getting asked about

Because the trade-off study fits on one slide. (It's slide 7 of the carousel.)

The whole architecture is below. The live demo (sample data, no signup) goes up tomorrow

What would you change?

#FastAPI #AWSLambda #Claude #BuildInPublic #AEC

Wed • 8am • Template A — Build log

First-comment URL: github.com/adinalieblch/pa-agent **Asset:** 1 screenshot of Today screen

Hashtags: [#BuildInPublic](#) [#PWA](#) [#Claude](#) [#AEC](#)

Lilach went live Monday. Two days in, here are the three things I'd rebuild already.

1. The first-time experience.

The token gate is the first thing a friend sees when I send the link. It's also the r

2. The "done" gesture.

Tap-the-check-circle works. Swipe-the-row-right works. Both shipped. Both feel "fine

3. The recurring-task UX.

"Drink water daily" recurs correctly under the hood — leap years, month lengths, over

Real-talk: shipping a thing into your own life surfaces problems that 40 unit tests c

What's the thing YOU shipped where day-2 friction told you the most?

Fri • 7pm • Template B — One prompt

First-comment URL: github.com/adinalieblch/engineering-team-minutes-

[system/raw/main/docs/What-AI-Wont-Tell-You.pdf](#) **Asset:** before/after screenshot pair **Hashtags:**

[#VBA](#) [#Claude](#) [#ExcelTips](#) [#AEC](#)

This prompt changed how I work in Excel:

"Rewrite this VBA sub as a single Range.Find loop. Preserve every Data Validation rule."

What that gives me: 90 minutes of refactoring → 8 seconds. No hallucinated dropdowns.

Why it works: the constraint ("no commentary") removes the AI's most wasteful pattern.

I now use 9 variants of this. They're all in the field guide (40 pages, free PDF – link in bio)

What's a prompt YOU now reuse without thinking about it?

#VBA #Claude #ExcelTips #AEC

WEEK 2 • Depth

Tue • 8am • Template C — Five corrections (CAROUSEL)

First-comment URL: github.com/adinalieblch/prompt-engineering **Asset:** 8-slide carousel (use [/pwa-v2/carousel-template.html](#) then Save as PDF) **Hashtags:** #PromptEngineering #VBA #Claude #BuildInPublic

Claude got this VBA refactor wrong five times in a row.

Here's what I corrected – and why each fix made the next one harder. Then I turned the

Swipe through the carousel:

- 01 Cover
- 02 Correction 01 – no preamble
- 03 Correction 02 – name the shape
- 04 Correction 03 – preserve by name
- 05 Correction 04 – quote the escape
- 06 Correction 05 – verify by re-reading
- 07 The skill (5 rules, one file)
- 08 The repo

If you're driving AI to write corporate-grade VBA or anything where a wrong word breaks

What's the correction you keep having to give your AI?

#PromptEngineering #VBA #Claude #BuildInPublic

Thu • 7pm • Template E — Confession

First-comment URL: demo.adinalieblich.com **Asset:** 1 photo of desk / DA stack / site notebook **Hashtags:**
#AEC #LocalGov #AI #CivilEngineering

I told my council AI couldn't handle compliance documents.

Six weeks later I'm walking that back. Here's why.

Original belief: regulatory language is too precise for an LLM. One wrong synonym and

The thing that broke the belief: I asked Claude to extract obligations as a checklist

New rule: the question isn't "can AI handle X?" It's "can I make the output checkable

That's it. That's the whole shift. Output you can verify line-by-line against a source

What did YOU get wrong about AI at work recently?

#AEC #LocalGov #AI #CivilEngineering

WEEK 3 • Build cred

Wed • 8am • Template D — Architecture carousel

First-comment URL: github.com/adinalieblch/engineering-team-minutes-system **Asset:** NEW
diagram (~2 hrs to build, in same style as Lilach arch) **Hashtags:** #VBA #Excel #SharePoint #AEC
#LocalGov

Architecture of the week: the Excel + VBA meeting-minutes system.

This is the one I built solo for a local government engineering team. Locked-down SharePoint.

Five sheets. One column architecture decision that killed an entire class of bugs (AEC).

The interesting bit: the system is the artifact, but the field guide of what AI gets to do.

Repo + the field guide PDF – link in comments. v1.0 kit released.

If you've built anything serious in Excel + VBA, what's the architectural decision you made?

#VBA #Excel #SharePoint #AEC #LocalGov

Fri • 8am • Template A — Build log

First-comment URL: github.com/adinalieblch/pa-agent **Asset:** terminal GIF (~5 min screen recording)

Hashtags: #AWSLambda #Notion #Webhooks #BuildInPublic

Shipped a Notion → Lambda webhook in 90 minutes this morning.

Use case: any new task created in a Notion database fires a Lambda which classifies tasks.

The thing that surprised me: Notion's webhook config doesn't include the page property.

Fix: a 200ms in-memory queue in the Lambda handler. Drained sequentially. ~30 lines of code.

Total cost: \$0.04 in API calls + \$0 in Lambda (under the always-free tier).

Worth ninety minutes? Absolutely. I'd been hand-classifying tasks for three weeks.

What did YOU automate this week that you should have automated months ago?

#AWSLambda #Notion #Webhooks #BuildInPublic

● WEEK 4 • Reach

Tue • 8am • Template B — One prompt

First-comment URL: github.com/adinaliebllich/engineering-team-minutes-system/raw/main/docs/What-AI-Wont-Tell-You.pdf **Asset:** screenshot pair (before = long doc, after = checklist) **Hashtags:** [#PromptEngineering](#) [#AEC](#) [#Claude](#)

The prompt that saved 4 hours yesterday:

"Rewrite this as a checklist. One row per requirement. Three columns: source line number, requirement, and action item."

I gave it a 47-page compliance document. Got back a 134-row checklist. Every row source line number, requirement, and action item.

Why it works:

- "One row per requirement" – forces atomicity
- "Three columns" – names the shape exactly
- "Don't paraphrase, quote" – removes the AI's worst failure mode (paraphrase-drift)
- "Source line number" – makes the output checkable

I've now used this prompt on five different document types. It works on compliance documents, meeting notes, and more.

Four more prompts like it in the field guide – link in comments.

What's your favourite "make AI do structure, not opinion" prompt?

[#PromptEngineering](#) [#AEC](#) [#Claude](#)

Thu • 7pm • Template C — Five corrections from readers (CAROUSEL)

First-comment URL: [\[set up a guide-v2 waitlist URL – Notion form or Mailchimp\]](#) **Asset:** 8-slide carousel **Hashtags:** [#FieldGuide](#) [#VBA](#) [#Claude](#) [#BuildInPublic](#)

Three weeks ago I published What AI Won't Tell You – a 40-page field guide on AI-assisted VBA. Here are the five most useful ones – the things I got wrong in v1 that v2 will fix.

Swipe through:

01 Cover

02 #1 – I missed the .Application.Volatile gotcha

03 #2 – My CF sqref advice was right but incomplete (Tables fix it cleanly, sometimes

04 #3 – Wrong about WorksheetFunction inside UDFs being always safe

05 #4 – Triple-quote escape pattern has one edge case I didn't document

06 #5 – Strategy 6 needs a "when NOT to use root-cause demand" caveat

07 The pattern: every reader correction sharpened a specific claim

08 v2 waitlist (link in comments)

This is the bit I'm enjoying most about publishing this thing – the corrections. Each

If you've used the guide and found something wrong – please write in. Best email is i

How to use this file

Monday morning (launch week): 1. Open the carousel template at vote.adinaliebllich.com/pwa-v2/carousel-template.html 2. Edit slide content for Week 1 Monday's post (architecture carousel) 3.

Cmd/Ctrl+P → Save as PDF → upload as document post to LinkedIn 4. Paste the Monday text from above as the post body 5. Hit publish at 8am AWST 6. Immediately post the first-comment URL in a reply 7. Pin your own reply 8. Stay near LinkedIn for 60-90 min — comments in that window get the algorithm boost

Every other post: - 80% of the work is reading the draft, editing one or two lines so it feels like YOU on the day, and hitting publish at the right time - The first comment URL is non-negotiable per the link-penalty data

If a draft doesn't feel right: - Send me the post number and what's off — I'll rewrite that draft only - The voice should match your real builds. If a story is wrong (e.g. "I never told my council that") swap to a real example
